CRB and ABTS Conveyor Wheel Assembly; Adhesive Change

Reference #037

Due to an environmental concern with exposure to fumes during assembly, certain Upper and Lower Quench Wheel Assemblies will now be assembled using a new 3M™ adhesive that also has a higher temperature rating.

Glasstech's cylindrical bending systems that utilize these parts are the CRB1, CRB2 and the ABTS (Architectural Bending & Tempering System). Effective immediately, the following Glasstech part numbers will be shipped after having been assembled with this new adhesive:

47B-833-A201-B	Lower Quench Wheel Assembly (CRB1, CRB2, ABTS)
XYZ-833-A201-B	Upper Quench Wheel Assembly (CRB1, CRB2)
55B-550-A002-C	Upper Quench Wheel Assembly (ABTS)

If there are any questions concerning this change, or if you have any feedback regarding the operation of these wheels, please feel free to contact Glasstech Customer Service using the information noted above.
