Bypass Orifice Plug in Krom Schroder Gas Regulators

Reference #041

The Kromschroder GI--- series gas regulators used on some Glasstech burner systems have a fixed bypass orifice for the light off gas. This is in the brass plug on the top of the regulator. On initial installations this is already set. Replacement regulators may not have the plug drilled out or may have the wrong orifice. Replace the plug in the new regulator with the plug from the old regulator or contact Glasstech for the correct orifice size for your application. (See Figure)
