Allen Bradley 1785-V40B Obsolescence

The PLC-5/40 VME Processor Module, Allen Bradley part number 1785-V40B (reference Glasstech part number E-PPL01PRMDP502) is no longer available through the manufacturer. The 1785-V40B is an integral component in the Allen Bradley VME controller rack used on your Glasstech control system.

In the short term these boards may be available through 3rd party sources with ever decreasing availability and increasing cost.

For a long term solution Glasstech recommends the replacement of the entire VME controller rack, including the Delta Tau[®] motion cards, with the new ControlLogix[®] based system with integrated motion control. The primary I/O structure currently in use with the PLC-5/40 controller will be retained as much as possible when the new ControlLogix 5500 series system is implemented.

Please contact our Aftermarket Sales Department for details concerning your specific options for the replacement of VME rack on your Glasstech system.
